

Omaheke 2011

Census Regional Profile

REPUBLIC OF NAMIBIA

2011 Population and Housing Census

Omaheke Region

Basic analysis with highlights

Foreword

The first Population and Housing Census in an independent Namibia was conducted in 1991. Since then, a Census has been undertaken every ten years, and the 2011 Population and Housing Census marks Namibia's third census since independence in 1990. The Census is demonstrative of the Namibia Statistics Agency's (NSA) commitment to providing relevant and quality statistics to support decision making, policy formulation and monitoring of development programmes.

This regional profile presents the result of the 2011 Namibia Population and Housing Census for the Omaheke Region. The report provides a wide range of indicators on population characteristics, household and housing conditions and households enumerated in the region between 28 August and 15 September 2011. The report further provides detailed information on age and sex composition, marital status, education, literacy, economic activity, orphan-hood, fertility and disability. In addition, household size, housing amenities, ownership and the quality of housing are also presented in this report. All these indicators are provided at regional, urban/rural and constituency level. It should be noted that internal migration was not possible to calculate at constituency level. However it was provided at regional level in the 2011 main census report launched on 27 March 2013, as well as in the Population Atlas released in June 2013.

This regional profile is the third of a series of reports to be released based on the 2011 census data. The first report - released in April 2012 - disseminated provisional results on the distribution of the population. The second report was the census main report, which presented more detailed results at national level.

We thank the Government of the Republic of Namibia for contributing significantly to the implementation of the 2011 census, as well as our development partners who provided technical or financial support. We are grateful to everyone who contributed to ensuring that the 2011 census was a success. In particular, we thank UNFPA, the Government of the United States of America through USAID and Statistics South Africa for their technical support to ensure the timely completion of census activities. We also thank the census inter-agency technical committee, line ministries, private institutions, the governor of the region and regional offices, field staff and the general public for their support, which was pivotal to the success of the 2011 Population & Housing Census.

We are hopeful that the users of this report will find its contents useful for their decision making and planning purposes, including business investments. Our commitment is to ensure that all statistics required by our users are readily available.

DR. JOHN STEYTLER

CHAPTER 1: INTRODUCTION

1.1 Background history

The Omaheke Region is situated in the Eastern Namibia. It borders Botswana in the east, while within the country it borders the Hardap region to the south-west, Khomas region to the west and Otjozondjupa region to the north-west. Omaheke is known for cattle farming and the Trans-Kalahari highway. The highway is Namibia's most important Central-Eastern gateway for travellers, and connects the country to Botswana, South Africa and Zimbabwe for goods transportation.

The region has seven (7) constituencies, namely: Aminius, Gobabis, Kalahari, Otjinene, Otjombinde, Steinhausen and Epukiro.

1.2 The 2011 Population and Housing Census

The 2011 Namibia Population and Housing Census results show that at the time of the census, Omaheke had a population of 71,233 people, of which 34,016 were women and 37,217 were men. The population is growing at an annual rate of 0.5 percent. The majority of the region's population (about 70 per cent) lives in rural areas. There were 16,170 households, with an average size of 4.3 persons per household.

This regional report provides more detailed findings in terms of the socio-economic, demographic, household and housing characteristics of the Omaheke region as collected during the 2011 census. Additionally, comparisons were made between the various census years as well as among constituencies and urban/rural within the region.

1.3 Organization of the report

The report is comprised of seven main chapters and an Annex. Chapter 1 provides a background of the region. Chapter 2 presents information on the population size, structure and composition, as well as the sex ratio and population density. Chapter 3 highlights information on marital status, citizenship and the registration of births, while information on population trends, with a focus on population growth, fertility and household deaths are provided in Chapter 4. Chapter 5 addresses the socio-economic characteristics of the population and mainly covers Information Communication Technology (ICT), literacy, education, disability, orphan-hood and economic activity. Chapter 6 provides information on household characteristics, including household size, household composition, main sources of income for the household, asset ownership, main language spoken at household level and agricultural activity. Chapter 7 presents information on housing characteristics, focusing on the types of housing units, tenure status, construction materials, water supply and sanitation, as well as sources of energy for the household.

Please note that:

1. Chapter 2 presents information for all persons, including those who were in hotels, overnight travellers, and people in prison, while chapters 3-7 present information obtained from all persons who were enumerated in private and institutional households only.
2. Imputation using the hot-deck method was applied for 'Not stated' and 'Don't know' responses on the age and sex of each person.
3. There are three Annexes: a Glossary of census terms, an Enumeration area map and Detailed tables

CHAPTER 2: POPULATION STRUCTURE, COMPOSITION AND DENSITY

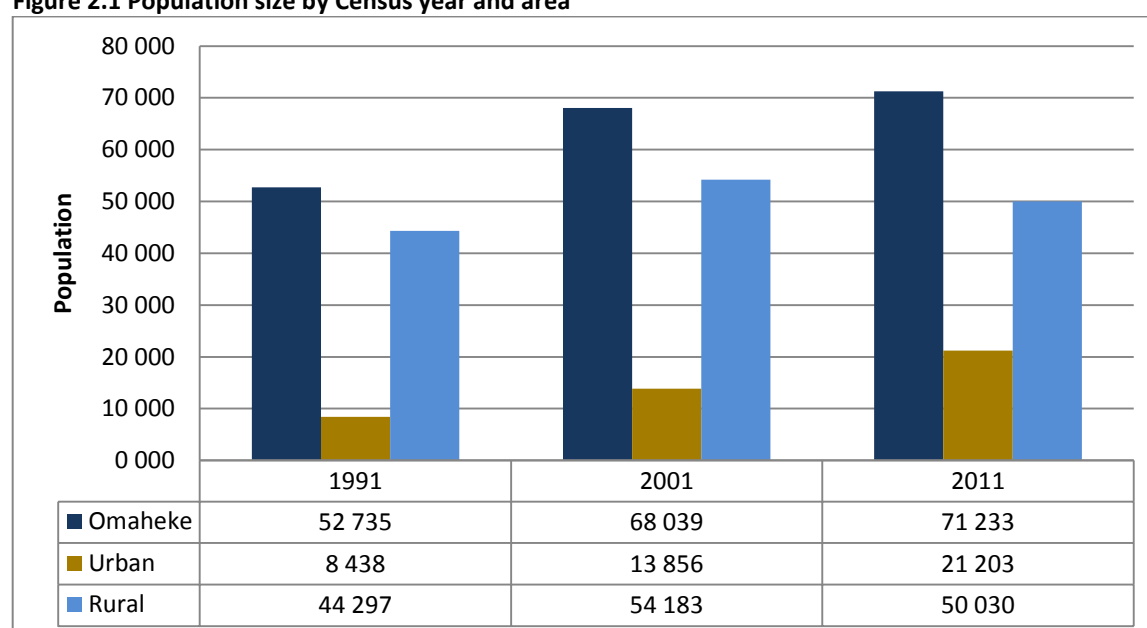

This chapter provides information on the population size, structure, composition and density of Omaheke Region. It also presents analyses of population trends between the 1991, 2001 and 2011 Census years.

2.1 Population size and Density

Total Regional Population was 71,233

Figure 2.1 provides a comparison of the population size by census year. The results show that the total population of Omaheke increased from 52,735 in 1991 to 68,039 in 2001, and further to 71,233 people in 2011. This trend is also observed in Omaheke's regional population, which has been increasing consistently over the Census years. The rural population, however, increased from 1991 to 2001, but took a dive between 2001 to 2011.

Figure 2.1 Population size by Census year and area

Population density is calculated as the average number of persons per square kilometre (sq km). Thus, it shows the relationship between a given population and the size of the country. Population densities calculated for all Constituencies are provided in Table 2.1. Omaheke has a low population density of only 0.8 persons per square kilometer.

At constituency level, Gobabis was the most densely populated constituency in the region, with 1.9 persons per square kilometres. On the other hand, Epukiro was the least densely populated constituency with a density of 0.3 persons per square kilometre.

The population density for the region was 0.8 persons per square kilometres (sq km)

Table 2.1 Population density by area

Area	Population	Area in sq. km	Population density
Omaheke	71 233	84 741.8	0.8
Aminius	12 306	12 994.5	0.9
Gobabis	20 993	5 770.3	3.6
Kalahari	7 611	12 248.3	0.6
Otjinene	7 306	6 420.3	1.1
Otjombinde	6 851	18 924.6	0.4
Steinhausen	10 060	17 457.0	0.6
Epukiro	6 106	10 926.8	0.6

Table 2.2 shows the proportion of the population living in rural and urban areas, as well as in the seven (7) constituencies of Omaheke region during the three census years.

The table shows that the proportion of the population living in rural areas was higher than in urban areas (70.2 % and 29.8% respectively). At constituency level, Gobabis constituency accommodated over 29 percent of the total population or 20,993 people, up from 22.2 percent 10 years ago. Only 9.6 percent of the population (6,851) lived in the Otjombinde constituency, which has not seen much change in its relative share over the past 10 years. It can be noted that the population in Epukiro has declined from 10.5 percent of the region's population in 2001 to 8.6 percent in 2011.

Table 2.2 Percentage share of the population within Census year and area

Area	Number		Percent	
	2001	2011	2001	2011
Omaheke	68 039	71 233	100.0	100.0
Urban	13 856	21 203	20.4	29.8
Rural	54 183	50 030	79.6	70.2
Aminius	12 392	12 306	18.2	17.3
Gobabis	15 119	20 993	22.2	29.5
Kalahari	9 443	7 611	13.9	10.7
Otjinene	7 790	7 306	11.4	10.3
Otjombinde	6 560	6 851	9.6	9.6
Steinhausen	9 600	10 060	14.1	14.1
Epukiro	7 135	6 106	10.5	8.6

2.2 Population structure and composition

This section provides information on the composition of the population in terms of gender and age, which are important demographic parameters.

2.2.1 Age structure

The age distribution of the population by broad age groups and area is presented in Table 2.3. Omaheke region had a relatively young population, with 39 percent of the whole population being less than 15 years of age. The share of young people below the age of 15 years in rural areas was 40.7 percent while that of urban areas was 34 percent. The region had a high working age population of about 54.5 percent, while the elderly made up 6.8 percent of the total population.

Table 2.3 Population distribution by age group and area

Area	Population	Age group			
		0-4	5-14	15-59	60+
Omaheke	71 233	15.0	23.7	54.5	6.8
Urban	21 203	12.7	21.3	60.7	5.4
Rural	50 030	16.0	24.7	51.9	7.4
Aminius	12 306	15.3	25.9	51.4	7.4
Gobabis	20 993	12.6	21.6	60.4	5.5
Kalahari	7 611	15.6	24.9	52.2	7.3
Otjinene	7 306	18.2	24.5	49.7	7.6
Otjombinde	6 851	17.3	25.0	51.2	6.4
Steinhausen	10 060	13.9	22.8	56.6	6.7
Epukeiro	6 106	17.4	23.9	49.6	9.1

2.2.2 Median age

Median age is used as an indicator to determine whether the population is young, intermediate or old. Thus, a country/region is considered young when it has a median age of less than 20 years, while countries with a median of 30 years and above is old. Populations with median ages between 20 and 29 are referred to as intermediate. Omaheke region had a median age of 21 years, and was therefore intermediate. A median age of 21 years means that half of the population was less than 21 years old, and the other half older than 21 years old.

Table 2.4 presents information on median age by sex, urban, rural and constituency level. The median age for the urban population was 22 years, which is slightly higher than the rural population median age of 20 years. Constituencies with large rural populations have rather young median ages.

The Omaheke Region's population has a median age of 21 years

Table 2.4 Median age by sex and area

Area	Median age		
	Total	Female	Male
Omaheke	21	20	21
Urban	22	22	22
Rural	20	19	21
Aminius	20	19	20
Gobabis	22	22	23
Kalahari	20	19	20
Otjinene	19	19	19
Otjombinde	19	17	20
Steinhausen	22	20	24
Epuke	19	19	20

52.2 percent of the region's population was male.

2.2.3 Sex composition

The 2011 Census collected information on the sex of every person. Table 2.5 gives the population distribution by sex, urban and rural areas, and constituencies. The results show that males made up more than half of the population (52.2%). However more females were found in urban areas, where the proportion of females was around 52 percent. Gobabis constituency was characterised by a higher ratio of females compared to the regional average, where the proportion of females was 50.8 percent. The table further shows that the proportion of males in Otjombinde constituency, i.e. 55.8 percent, was higher than the proportion of males in all the other constituencies of the region.

Table 2.5 Population distribution by sex and area

Area	Total	Female	Percent	Male	Percent
Omaheke	71 233	34 016	47.8	37 217	52.2
Urban	21 203	11 059	52.2	10 144	47.8
Rural	50 030	22 957	45.9	27 073	54.1
Aminius	12 306	5 773	46.9	6 533	53.1
Gobabis	20 993	10 671	50.8	10 322	49.2
Kalahari	7 611	3 717	48.8	3 894	51.2
Otjinene	7 306	3 488	47.7	3 818	52.3
Otjombinde	6 851	3 026	44.2	3 825	55.8
Steinhausen	10 060	4 562	45.3	5 498	54.7
Epuke	6 106	2 779	45.5	3 327	54.5

2.2.4 Sex ratio

Sex ratio is another measure of sex composition and is the proportion of males per 100 females in a given population.

Table 2.6 provides the sex ratio by urban and rural areas and constituencies. The sex ratio for Omaheke was 109, implying that on average, there were more males for every 100 females in this region. More males were found in rural areas (118) in 2011. This trend is also observed in constituencies with more rural areas. This indicates a decline in the sex ratio of urban areas, as more and more females have migrated to urban areas during the last 10 years.

Table 2.6 Sex ratio by Census years and area

Area	Sex ratio and Census year	
	2001	2011
Omaheke	109.5	109.4
Urban	96.7	91.7
Rural	113.0	117.9
Aminius	110.4	113.2
Gobabis	100.5	96.7
Kalahari	108.9	104.8
Otjinene	109.2	109.5
Otjombinde	123.9	126.4
Steinhausen	113.1	120.5
Epukiro	111.2	119.7

On average there were 109 men for every 100 women in the Omaheke Region.

2.2.5 Age-sex pyramid

Age-sex pyramids provide important illustrations of the demographic characteristics of the population.

Figure 2.2 shows the population pyramid for Omaheke by five-year age groups. The pyramid indicates a broad base and a very narrow apex with some bulk in the middle age groups. This indicates that the region had a relatively young population with more people in the middle age group and fewer in the old age groups. The shape is a typical reflection of a population with a high fertility rate and a low mortality rate.

Figure 2.2 population pyramid, Omaha region

Figure 2.3 presents the population pyramid for urban areas in five-year age groups. The pyramid is bulky in the middle and has a relatively narrow apex, indicating that urban areas have a large proportion of working-age people (between 15-44 years of age) and a much smaller proportion of elderly people.

Figure 2.3 Population pyramid, Omaha Urban

Figure 2.4 Population pyramid, Omaheke Rural

CHAPTER 3: POPULATION CHARACTERISTICS

This chapter provides information on the demographic characteristics of the Omaheke Region, and focuses on marital status, citizenship and status of birth registration.

Close to 15.6 percent of the population aged 15 years and above was married with certificate

3.1 Marital status

During the census, all people were asked to state their marital status in one of the following categories: never married, married with certificate, married traditionally, consensual union, divorced/separated and widowed. For international comparisons the analysis focuses only on the population aged 15 years and above, although we acknowledge that there are cases of child marriage in Namibia.

Figure 3.1 shows that about 58 percent of population of the population aged 15 years or above in Omaheke region were never married, while 10.2 percent were traditionally married. The results also indicate that 15.6 percent of the population were married with certificate and 11.1 percent were in consensual unions. The high number of people that were never married can be explained by the young population.

Figure 3.1 Percent distribution of marital status for population aged 15 years and above

3.2 Citizenship

The census asked all persons to state their country of citizenship, from which the number of Namibians and non-Namibians is reported.

Table 3.1. The Table shows that the great majority of people enumerated (98.8%) in the 2011 census were Namibians.

Table 3.1 Population distribution by citizenship and sex

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	70 729	100.0	33 879	100.0	36 850	100.0
Namibians	69 876	98.8	33 475	98.8	36 401	98.8
Non-Namibians	852	1.2	403	1.2	449	1.2
Don't Know	1	0.0	1	0.0	0	0.0

Table 3.2 shows the distribution of non-Namibians by selected countries of origin. However, it only lists countries of origin from which citizens constitute a substantial share of the total non-Namibian population.

South African nationals represented the highest proportion of foreigners residing in Omaheke (13.1%). This figure has dropped from 18 percent in 2001. Only 10.8 percent of non-Namibian nationals living in the region were from European Countries.

Table 3.2 Non- citizen's population by sex and country of origin

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	951	100.0	460	100.0	491	100.0
Angola	34	3.6	8	1.7	26	5.3
Botswana	55	5.8	30	6.5	25	5.1
South Africa	125	13.1	56	12.2	69	14.1
Zimbabwe	49	5.2	25	5.4	24	4.9
Other SADC Countries	247	26	119	25.9	128	26.1
Other African Countries	298	31.3	143	31.1	155	31.6
European Countries	103	10.8	61	13.3	42	8.6
American countries	19	2.0	12	2.6	7	1.4
Asian And Oceanic Countries	21	2.2	6	1.3	15	3.1

About 94.1 percent of the population has acquired birth certificates

3.3 Namibian Birth Registration

The Census collected information on whether or not respondents were in possession of a Namibian birth registration certificate. Birth certificates are needed to access social services, such as social grants and educational services.

Table 3.3 below shows that 94 percent of the population possessed a Namibian birth certificate. At constituency level, the highest proportion of people with birth certificates was in Gobabis (95.4%), while the lowest constituencies were Otjinene and Otjombinde with 89.9 percent each.

Table 3.3 Namibian birth certificate status by area

Area	Total	With birth certificate		Without birth certificate		Don't Know	
		Number	Percent	Number	Percent	Number	Percent
Omaheke	69 876	65 389	93.6	4 192	6.0	295	0.4
Aminius	12 176	11 338	93.1	799	6.6	39	0.3
Gobabis	20 463	19 514	95.4	877	4.3	72	0.4
Kalahari	7 437	7 019	94.4	356	4.8	62	0.8
Otjinene	7 201	6 474	89.9	681	9.5	46	0.6
Otjombinde	6 796	6 111	89.9	665	9.8	20	0.3
Steinhausen	9 754	9 202	94.3	529	5.4	23	0.2
Epukiro	6 049	5 731	94.7	285	4.7	33	0.5

CHAPTER 4: POPULATION TRENDS AND URBANISATION

This chapter analyses population trends, including changes in population growth, fertility, crude birth rates, and household deaths.

The annual population growth rate between 2001 and 2011 was 0.5 percent

4.1 Population growth

The population of Omaheke region has been growing slowly since the 2001 Census. Table 4.1 provides population increase and annual growth rates between 2001 and 2011.

The annual growth rate for Omaheke region between 2001 and 2011 was 0.5 percent. The annual population growth rate for urban areas was much higher, at 4.3 percent, but there was a negative growth of 0.8 percent in rural areas. At constituency level, Gobabis (3.3%) recorded the highest growth rate, while most other the constituencies recorded a decrease in the growth rate between 2001 and 2011 period.

Table 4.1 Population change and annual growth rates for 2001-2011 by area

Area	Population		Population change (2001-2011)	Annual growth rate (2001-2011)
	2001	2011		
Omaheke	68 039	71 233	3 194	0.5
Urban	13 856	21 203	7 347	4.3
Rural	54 183	50 030	-4 153	-0.8
Aminius	12 392	12 306	-86	-0.1
Gobabis	15 119	20 993	5 874	3.3
Kalahari	9 443	7 611	-1 832	-2.2
Otjinene	7 790	7 306	-484	-0.6
Otjombinde	6 560	6 851	291	0.4
Steinhausen	9 600	10 060	460	0.5
Epukiro	7 135	6 106	-1 029	-1.6

4.2 Fertility

The census collected information on live births from all women aged 15 - 49 years. Generally indicators of fertility measure the frequency of child bearing in a given population. This section presents two indicators of fertility, namely: Crude Birth Rate (CBR) and Age at first birth for women aged 15 – 49 years, irrespective of their marital status or whether they have borne any child.

4.2.1 Crude Birth Rate

The Crude Birth Rate (CBR) is the number of live births per 1,000 of the total female and male population per year. 2,095 children were born during the 12-months prior to the 2011 census date, giving a reported or unadjusted CBR of 29.4 births per 1,000 people.

Table 4.2 indicates that the CBR was higher in urban areas (34.6 births) as compared to in rural areas (27.2) per 1,000 people. At the constituency level, Kalahari had the highest CBR of 34.8 births per 1,000 people, while Epukiro had the lowest CBR, with 22.9 births per 1,000 people.

Table 4.2 Crude Birth Rates by area

Area	Population	Birth in the last 12 months	CBR
Omaheke	71 233	2 095	29.4
Urban	21 203	734	34.6
Rural	50 030	1 361	27.2
Aminius	12 306	305	24.8
Gobabis	20 993	712	33.9
Kalahari	7 611	265	34.8
Otjinene	7 306	192	26.3
Otjombinde	6 851	202	29.5
Steinhausen	10 060	279	27.7
Epukiro	6 106	140	22.9

Unadjusted crude birth rate was estimated at 29 births per 1,000

4.2.2 Age at First Birth

Age at first birth influences the total number of births that a woman might have in her life. This, in turn, has an impact on the size, composition, and future growth of the population.

Table 4.3 shows that the average age of mother at first birth in Omaheke region was close to 21 years. A similar trend was observed for urban and rural areas. However, there were slight differences between constituencies. Mother in most of the constituencies gave birth for the first time at an early age of around 20 years, with the exception of those in Kalahari, who on average delayed pregnancy until the age of 21 years.

Table 4.3 Average age of mother at first birth by area

Area	Average age at first birth
Omaheke	20.6
Urban	20.7
Rural	20.6
Aminius	20.8
Gobabis	20.8
Kalahari	21.0
Otjinene	20.2
Otjombinde	20.2
Steinhausen	20.3
Epukiro	20.5

4.3 Deaths in the household

Information on deaths in the last 12 months (September 2010 to August 2011) was collected from all households during the Census. If any death occurred in a household, respondents were asked to state whether the death had been registered. Usually, mortality indicators are based on data from civil registration, but in Namibia this coverage is incomplete. It must also be acknowledged that information from surveys and Censuses may be under-reported, which can lead to underestimates of the level of mortality.

4.3.1 Reported Deaths

Figure 4.1 presents the distribution of the reported deaths in the last 12 months by sex, urban and rural. A higher proportion of all deaths was recorded for males (52.2%) than females (48%). The figure shows that, a higher proportion of women than men died in the urban areas; while a higher proportion of men died in rural areas.

Figure 4.1 Distribution of reported deaths in the last 12 months by sex and area

4.3.2 Crude Death Rate

Crude Death Rate (CDR) is defined as the number of deaths that occurred in a given calendar year per 1,000 people in the population.

Table 4.2 shows that a total of 801 deaths occurred during the 12 months prior to the Census in Omaheke region. This gives a CDR of 11.2 deaths per 1,000 people. The results further show that more deaths were reported in urban (13.4) than rural areas (10.3). At the constituency level, the highest death rate was in Otjinene (14.5) while the lowest rate was recorded in Steinhausen (8.2).

Table 4.4 Number of reported deaths in the last 12 months and CDR by area

Area	Population	Number of reported deaths	CDR
Omaheke	71 233	801	11.2
Urban	21 203	284	13.4
Rural	50 030	517	10.3
Aminius	12 306	134	10.9
Gobabis	20 993	264	12.6
Kalahari	7 611	63	8.3
Otjinene	7 306	106	14.5
Otjombinde	6 851	69	10.1
Steinhausen	10 060	82	8.2
Epukiro	6 106	83	13.6

The crude death rate was 11.2 per 1,000 persons

4.3.3 Death Registration

Table 4.5 shows that 93.8 percent of all reported deaths in the 12 months before the 2011 Census were registered. Rates of registration were higher in urban areas (94.7%) than in rural areas (93.3%). At constituency level, more than 96 percent of deaths were registered in Kalahari and Epukiro while the lowest percentage of deaths were registered in Steinhausen (90.2).

Table 4.5 Death registration status by area

Area	Number of reported deaths	Total registered deaths	Percent registered
Omaheke	801	751	93.8
Urban	284	269	94.7
Rural	517	482	93.2
Aminius	134	128	95.5
Gobabis	264	247	93.6
Kalahari	63	61	96.8
Otjinene	106	97	91.5
Otjombinde	69	64	92.8
Steinhausen	82	74	90.2
Epukiro	83	80	96.4

CHAPTER 5: SOCIO-ECONOMICS CHARACTERISTICS OF THE POPULATION

This chapter deals with the socio-economic characteristics of the Omaha Region's population. The information discussed herein is crucial for decision making, planning and monitoring of development programmes and policies. The sub-topics discussed include: Information Communication Technology (ICT), Early Childhood Development (ECD), Education and Literacy, Disability and the Labour Force.

More than 67 percent of the population in Omaha region have access to a radio

5.1 Information and Communication Technology (ICT)

Information on the usage of or access to ICT facilities was collected from people aged 3 years and above. This information includes access to information and communication technology such as radio, television, computer, cell phone, telephone (fixed line), newspaper (daily/weekly) and internet (daily/weekly).

Figure 5.1 shows that the majority (67%) of the population in Omaha region had access to radio, with slightly greater access in urban (69%) than rural (66%) areas. Cell phones (45%) are much more widespread across the region than fixed line telephones (5.5%). However, access to other modern information and communication technology such as computers and internet is fairly limited, particularly in rural areas.

Figure 5.1 Population aged 3 years and above who have access to ICT by type of service or use and area

5.2 Early Childhood Development (ECD)

Respondents were asked to state whether children aged 0-4 years attended any type of Early Childhood Development (ECD) programme such as Edu-care (day-care, crèche, kindergarten) and pre-primary school.

6.5% of children aged 0-4 years in the Omaheke Region were attending Early Childhood Development programmes

Table 5.1 shows that a total of 10,671 children aged 0-4 years were counted in the Omaheke region. Of these, about 6.5 percent were attending ECD programmes. Access to ECD programmes in urban areas was slightly better than the regional average, with close to 8 percent of children attending ECD facilities, compared to 5.8 percent in rural areas.

At constituency level, Aminius and Steinhausen had the highest rates (8.1% each) of ECD attendance amongst children aged 0-4 years (8%), while Otjinene had the lowest rates, with only 2.8 percent.

Table 5.1 Population aged 0-4 years attending ECD by sex, and area

Area	Population 0 - 4 years			Attending ECD			Percent attending		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
Omaheke	10 671*	5 241	5 430	692	336	356	6.5	6.4	6.6
Urban	2 670	1 343	1 327	225	113	112	8.4	8.4	8.4
Rural	8 001	3 898	4 103	467	223	244	5.8	5.7	5.9
Aminius	1 887	917	970	152	69	83	8.1	7.5	8.6
Gobabis	2 620	1 321	1 299	203	103	100	7.7	7.8	7.7
Kalahari	1 185	603	582	71	34	37	6.0	5.6	6.4
Otjinene	1 329	639	690	37	16	21	2.8	2.5	3.0
Otjombinde	1 185	563	622	44	20	24	3.7	3.6	3.9
Steinhausen	1 403	687	716	114	63	51	8.1	9.2	7.1
Epukiro	1 062	511	551	71	31	40	6.7	6.1	7.3

Note: *This includes only children enumerated in private and institutional households

Table 5.2 presents the population aged 0-4 years attending ECD by type and area. Attendance in Pre-primary was higher (52.2%) than in Edu-care (47.8%). Steinhausen and Epukiro showed the largest discrepancies between pre-primary school attendance vs. Edu-care attendance, with Kalahari and Stenhausen preferring Edu-care, and Epukiro being in much greater favour of pre-primary school programmes.

Figure 5.2 Percentage distribution of children aged 0-4 years attending ECD by type and area

5.3 Education and Literacy

Information on literacy and education is vital for many purposes, including for Government to articulate and monitor national development programs and goals. During the census, specific information on education and literacy was collected from all people aged 5 years and above.

73.3 percent of Omahake's population aged 15 years and above were literate

5.3.1 Literacy

Literacy can be defined as the ability to read and write with understanding in any language. Therefore, all people aged 5 years and above were asked whether they can read and write in any language with understanding. No test was, however, administered to determine the level of literacy.

Table 5.3 provides information on literacy rates for the population aged 15 years and above. The table shows that the regional literacy rate was 73.3 percent, with no major difference between the rates for males and females. The literacy rate in urban areas stood at 82.4 percent, while rural areas had a literacy rate of 69.0 percent. Furthermore, the table shows that literacy was highest in Gobabis (80.4%) and lowest in Kalahari (58.1%).

Table 5.2 Literate population aged 15 years and above by sex and area

Area	Population 15 years and above			Literate			Literacy rate		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
Omaheke	43 200	20 258	22 942	31 671	14 805	16 866	73.3	73.1	73.5
Urban	13 777	7 303	6 474	11 357	5 980	5 377	82.4	81.9	83.1
Rural	29 423	12 955	16 468	20 314	8 825	11 489	69.0	68.1	69.8

Otjombinde	3 951	1 654	2 297	2 533	1 076	1 457	64.1	65.1	63.4
Steinhausen	6 216	2 686	3 530	4 087	1 708	2 379	65.7	63.6	67.4
Epukeiro	3 578	1 590	1 988	2 815	1 244	1 571	78.7	78.2	79.0

Table 5.3 indicates that the literacy rate for youth aged 15 - 24 years in Omaheke was 81.3 percent, with a higher proportion of females (82.6%) than males (80.1%) being literate. The rate was higher in urban areas (88%) than rural areas (77.9%). The literacy rate for young females in rural areas was 2.2 percentage points higher than males, while in urban areas the literacy rates were almost the same with a difference of 1 percent.

81 percent of persons aged between 15 -24 years is literate

At constituency level, the highest literacy rate was in Gobabis (86.1%) and the lowest was in Kalahari (69.2%).

Table 5.3 Literate youth population aged 15-24 years by sex and area

Area	Population 15-24 years			Literate			Literacy rate

5.3.2 Formal Education

Formal education can be defined as full-time attendance at any regular educational institution, public or private, for systematic instruction.

The categories of formal education used during the census were: pre-primary schools, primary schools, secondary or high schools, technical schools, agricultural institutions, teacher training colleges, polytechnics and universities.

Close to 29 percent of the population aged 6 years and above in rural areas have never been to school

5.3.2.1 School Attendance

Table 5.4 shows that out of the population aged 6 years and above in Omaheke region, 25.4 percent had never attended school. A higher proportion of the population that never attended school was found in rural areas (28.9) and in constituencies made up predominantly of rural areas.

The table indicates that there was no difference in the proportion of people who attended adult education programmes in urban areas compared to rural areas (0.5%).

Table 5.4 Percent distribution of school attendance for population aged 6 years and above by area

Area	Population 6 years and above	Never attended	Pre- primary	Adult education programme	Attending school	Left school	Don't know
Omaheke	57 938	25.4	1.2	0.5	24.5	45.3	3.1

5.3.2.2 Educational Attainment

Table 5.5 shows that about 42.2 percent of the region's population had completed their Primary education and 23 percent had completed secondary education before leaving school. Only 3.5 percent of Omaheke Region's population had completed Tertiary education.

About 42.2 percent of the total population aged 15 years and above had completed their Primary education before leaving school

Table 5.5 Distribution of the population aged 15 years and above who left school by highest level of educational attainment and sex

5.3.2.3 School Enrolment

Figure 5.3 presents school enrolment for the school-going population between the ages of 5 and 24 years. Enrolment rates were highest for the ages of 7 to 13 years (the usual age range for primary schooling), ranging between 69 to 83 percent. However, these rates dropped after the age of 16 years. More females than males were enrolled until the age 16 years.

Over 70 percent of the children aged between 8 and 13 years were enrolled in school

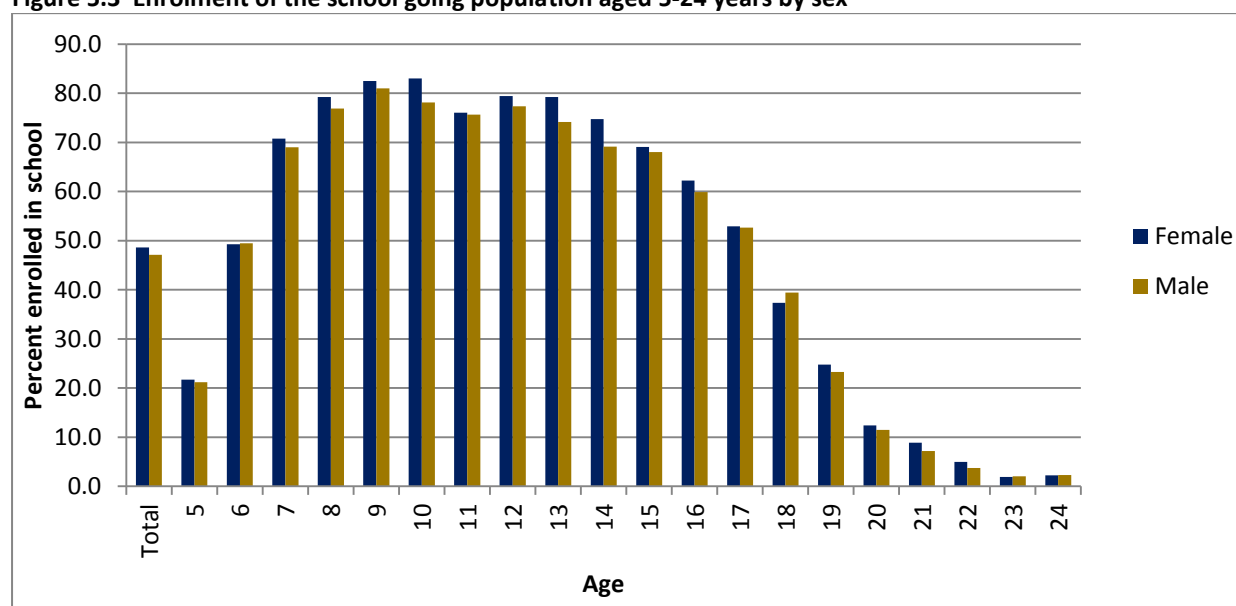

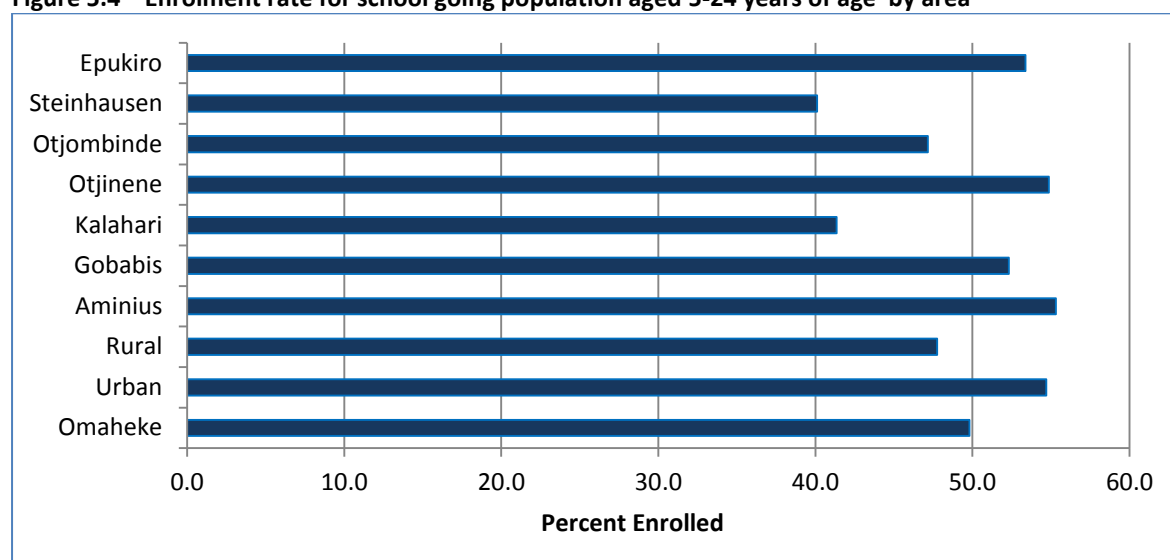

Figure 5.3 Enrolment of the school going population aged 5-24 years by sex

Table 5.6 presents school enrolment rates for urban and rural areas. The table shows that the enrolment rates were higher in urban (54.7%) than rural areas (47.7%).

Table 5.6 School enrolment for population aged 5-24 years by area

Figure 5.4 illustrates the school enrolment rate for the population aged 5 to 24 years by area. The graph shows that school enrolment rate was highest in Aminius, where it was just over 55 percent. By contrast, the lowest enrolment rates were in Steinhausen, where only 40 percent of the population aged 5 to 24 years was enrolled at school.

Figure 5.4 Enrolment rate for school going population aged 5-24 years of age by area

Primary school enrolment rates are presented in table 5.7. The results show that overall, the enrolment rate was 77.4 percent for children aged 7-13 years old. The enrolment rate was higher in urban areas (85%) than in rural areas (74.5). The table also shows that slightly more girls in this age group were likely to enroll in rural schools than boys. At constituency level, the highest enrolment rates was recorded in Gobabis (83%), and the lowest in Kalahari (66%).

77 percent of the children aged between 7 - 13 years were enrolled in primary school

Table 5.7 Primary school enrolment for population aged 7-13 years by area

5.4 Disability

Disability was defined as a long-term physical, psychological or mental condition that limits a person from carrying out everyday activities at home, work or school. It may be present from birth or developed during a person's lifetime. Information on disability assists government in planning infrastructure, education systems and community awareness programmes amongst Other.

During the Census, all persons in private households and institutions were asked about the types of long-term/permanent disabilities or limitations they have. Ten types of disability were identified for this purpose: blindness, visual impairment, deafness, hearing difficulties, mute/dumb, speech impairment, physical impairment of lower and upper limbs, mental disability, albinism and autism.

Table 5.8 indicates that 3.5 percent of Omaheke's total population were living with disabilities. The proportion of people living with disabilities was the same in both urban and rural areas (3.5%). Constituency figures show that Otjombinde had the highest proportion of disabled people (5%), while Kalahari had the lowest (2.4%).

3.5% of the total population was disabled

Table 5.8 Population with disability by constituency

Area	Population			with disability			Percent		
	Total	Female	Male	Total	Female	Male	Total	Female	Male

Note: *The total is the number of persons with disability. This is not the total in the column as some persons have multiple disabilities

Table 5.10 indicates that in urban areas, the highest proportion of people with disabilities were those with upper and lower limb impairments (38.3%). The proportion of people in rural areas with upper and lower limb impairments was 36.7 percent. In both rural and urban settings, albinism and autism formed the smallest proportion of the population living with disabilities, with each affecting about 1 percent of the population.

Table 5.10 Percent distribution of population with disabilities by type and areas

Note: *The total is the number of persons with disability. This is not the total in the column as some persons have multiple disabilities

Table 5.11 shows that in Omaheke region, about 42 percent of people living with disabilities have difficulty engaging in any learning and/or economic activity. There were no significant differences between males and females in this respect, but a higher proportion of people with difficulties in engaging in any learning and/or economic activity were observed in rural (43.2%)

than urban (39.7%) settings. The Otjinene constituency had the highest proportion of people living with disabilities, who faced challenges engaging in any economic activity.

Table 5.11 Population with difficulties to engage in any learning and/or economic activity by sex and area

Area	Disabled Population			Inability Population			Percent		
	Total	Female	Male	Total	Female	Male	Total	Female	Male

5.5 Orphan-hood

Orphan-hood is the condition of being less than 18 years of age and without one or both parents. Information on orphans was collected from all members of the household.

Table 5.13 shows that over 9 percent of the population aged 18 years and below in Omaheke region had lost one parent, while 1.9 percent had no parents. Cases of orphan-hood were more prevalent in urban than in rural areas. The proportion of this population with a single parent in

urban areas was 11 percent, which is relatively high compared to 9 percent in rural areas. At constituency level, the highest level of orphanhood were likely to be in Kalahari with 9 percent having one of their parent dead.

9.3% of all children aged less than 18 years

Table 5.13 Percentage distribution of orphaned population 18 years and below by area

Area	Total population less than 18 years	With one parent dead		With both parents dead	
		Total	Percent	Total	Percent
Omaheke	32 987	3 080	9.3	643	1.9

5.6 Economic Activity

During the census enumeration, all people aged 8 years and above were asked about their economic activity within the seven days prior to the census reference night. The analyses presented below, however, only focus on the population aged 15 years and above. Unlike the labour force survey, which gives detailed information on specific activities, the census only provides an overview of employment and economic activity.

The diagram in figure 5.5 illustrates the composition and definition of the economically active and inactive population. Economically inactive people are students, homemakers and income recipients, while the economically active population is divided into unemployed and employed people. The diagram shows that 65.2 percent of the population aged 15 years and above was economically active, 23.6 was economically inactive, and information for the remaining 11.2 percent of the population was not available.

65.2% of the population aged 15 years and above were economically active

Figure 5.5 Diagram of the Population aged 15 years and above by activity status

5.6.1 Economically Active Population

Table 5.14 shows that 60.5 percent of the economically active population aged 15 years and above was employed while 39.5 percent was unemployed. There were slight differences between urban and rural areas whereby 63 percent was employed in rural, compared to 55 percent in the urban areas.

Table 5.14 Employment status of economically active population aged 15 years and above by sex and area

Area	Economically active population 15 years and above			Percent		
	Total	Female	Male	Total	Female	Male
Omaheke	28 161	12 154	16 007	100.0	100.0	100.0

Unemployed	6 595	3 560	3 035	36.5	51.3	27.2

5.6.2 Labour Force

The labour force participation rate is the proportion of economically active people in a given population group. This is calculated as the number of economically active population divided by the total population.

Table 5.15 indicates that the labour force participation rate for the Omaheke region was 65.2 percent. The rate was higher for males (69.8%) than for females (60%). The rate of labour force participation was higher in urban areas (73.1%) than in rural ones (61.5%).

At constituency level, labour force participation rate was highest in Gobabis (73.9%) and very low in Epukiro constituency (39.4%). The labour force participation rate for females was lower than that of males in all constituencies.

Table 5.15 Labour Force Participation rate by sex and area

Area	Population 15 years and above			Number in labour force			Labour Force Participation rate		
	Total	Female	Male	Total	Female	Male	Total	Female	Male

Steinhausen	6 216	2 686	3 530	4 525	1 630	2 895	72.8	60.7	82.0
Epukiro	3 578	1 590	1 988	1 408	547	861	39.4	34.4	43.3

5.6.3 Population and Main Occupation

Table 5.16 shows that elementary occupations made up the largest occupation group (37.8%), followed by skilled agricultural/fishery workers (22.9%). More males than females were found in the two occupation groups. On the other hand, more females were employed as service workers, professionals and clerks than males.

Skilled agricultural/fishery workers made up the largest occupation group with 22.9%

5.6.4 Employment by Industry

Table 5.17 shows the employed population by main industry and sex in the Omaha Region. The results show that agriculture, forestry and fishing was the main industry, with a high rate (45%), followed by administration and support services (8.5%).

Administration and support services and Activities of Private Households were clearly the domain of women, while men were predominantly employed in agriculture, forestry, fishing and construction.

5.6.5 Employment by Educational Attainment

Table 5.18 shows that about 29 percent of the employed population in the region had no formal education. Of the employed population of males, 33 percent had no formal education. The table further shows that close to 26 percent of employed people had completed their primary education, while only about 4 percent had completed tertiary education. Women were better educated than men, on average. About 21 percent of employed women had completed secondary education and 5.5 percent tertiary education, compared to 13.3 percent and 3.2 percent of the employed men, respectively.

5.6.6 Main Job Undertaken

Table 5.19 shows that the private sector provided jobs for the largest proportion of employees (29.9%) in the Omaheke Region. The lowest proportion of main job undertaken was 'other unpaid family worker', with 0.4 percent of the employed population falling into this category. It is observed that more women than men were employed by the private sector, but commercial farming was dominated by men.

Table 5.19 Main job of employed population aged 15 years and above by sex

5.6.7 Unemployment

The unemployment rate is the proportion of the unemployed population in the labour force for a given population group (i.e. the number of unemployed people in the labour force, divided by the population of the labour force in the same population group).

Figure 5.6 presents the distribution of the unemployed population in terms of their level of educational attainment. The results show that about 30 percent of the unemployed population had no formal education, 26 percent had incomplete primary schooling, and 0.5 percent had completed tertiary education.

Figure 5.6 Population distribution of unemployed people by educational attainment

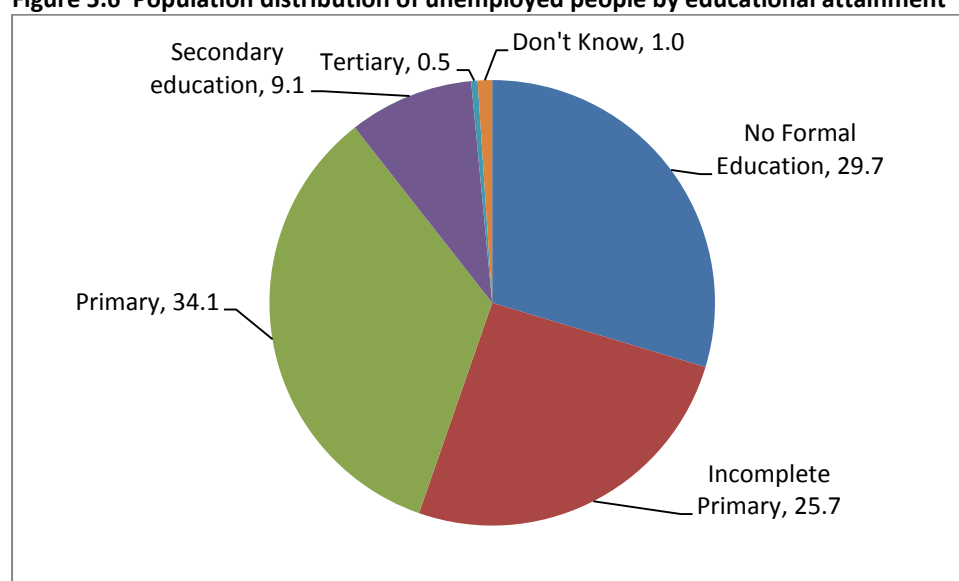

Table 5.20 shows that 27 percent of the unemployed population were actively looking for work. The proportion of females looking for work was higher than males (33.7% and 21.5% respectively). It can be observed that the percentage of job seekers in urban areas was higher than in rural areas (29.1% and 22.5% respectively). The result also indicates that in all constituencies, higher proportions of unemployed females than males were actively looking for work. However, the highest proportion of job seekers for both sexes was in Epukiro (42.5%) than in all constituencies.

Table 5.20 Unemployed population 15 years and above, actively looking for a job by sex and area

5.7 Economically Inactive Population

Table 5.21 provides information on the economically inactive population. Students constituted the largest share (51.6%), while those unable to work due to disabilities had the lowest share, with 1.6 percent. Women dominated the category of homemakers (34.9 % of all economically inactive women), while males formed the greater proportion of the economically active population who are students (39.6%).

Table 5.21 Activity status of economically inactive population 15 years and above by sex

CHAPTER 6: HOUSEHOLD CHARACTERISTICS

This chapter presents information on household characteristics, particularly on household sizes, composition and income. Information on household assets, main languages spoken and agricultural activities is also outlined.

A household is defined as a group of people - related or unrelated - who live in the same dwelling unit and share or have common catering arrangements.

6.1 Household size

Table 6.1 shows that on average, a household in the Omaheke Region consists of 4.3 persons, on average, which declined from 5.3 persons in 2001. The average household size was slightly smaller in urban areas (3.9) than in rural areas (4.5) persons. The average household size in Epukiro was the largest of the seven constituencies at 4.9 persons per household. This represented a big drop from an average size of 7.1 in 2001.

Gobabis had the lowest average household size of 3.9 persons in 2011, also a slight decrease from 4.1 persons per household recorded in 2001.

**Table 6.1 Average household size by
Census year and area**

Area	2001	2011
Omaheke	5.3	4.3

Otjombinde	6.2	4.6
Steinhausen	4.8	4.2
Epukiro	7.1	4.9

Average Household size for the Omaheke
Region was 4.3 persons

6.2 Household composition

Table 6.2 presents the distribution of the household population by relationship to the head of the household.

Sons and daughters of the head accounted for about 25.7 percent, while grandchildren (11.8%) and other relatives (20.2%) made up other significant proportions of household membership. Only 8.2 percent of household members were spouses.

Table 6.2 Household population by sex and relationship to the head of household*

Relationship to head	Population			Percent		
	Total	Female	Male	Total	Female	Male
Total	69 620	33 479	36 141	100.0	100.0	100.0

Don't Know	59	23	36	0.1	0.1	0.1

Note: * The table refers only to conventional/private households

6.2.2 Sex of Household Head

Table 6.3 shows that most households (55.8%) in Omaheke were headed by males. This trend was observed at urban, rural and constituency levels.

Table 6.3 Percent distribution of household head by sex and area

Area	Total Households	Number		Percent	
		Female	Male	Female	Male
Omaheke	16 174	5 441	10 733	33.6	66.4
Urban	5 275	2 331	2 944	44.2	55.8
Rural	10 899	3 110	7 789	28.5	71.5

Steinhausen	2 328	554	1 774	23.8	76.2
Epukiro	1 231	419	812	34.0	66.0

6.2.3 Household Headed by Children and Orphans

Households headed by children and orphans require the attention of Government and other stakeholders. Table 6.4 provides information on households which were headed by children and orphans aged 18 years old or younger; and shows that at the regional level 2 percent of all households in the Omaheke Region were headed by children, while 0.6 percent of households were headed by orphans.

There were higher proportions of households headed by children in rural areas (2.2%) than in urban areas (1.5%). At constituency level, Otjombinde (2.9%) and Kalahari (2.5%) had the highest number of households headed by children while Steinhausen had the lowest (1.4%).

Table 6.4 Percent Distribution of Child and Orphan headed households by area

Population	Households	Child headed	Orphan headed

Otjombinde	1 505	2.9	1.0
Steinhausen	2 328	1.4	0.3
Epukiro	1 231	2.0	0.4

6.3 Household Income

Households were asked to state their main source of income, which included: farming, business activities (non-farming), wages and salaries, old age pension, cash remittances, retirement fund, grants for orphans and grants for people living with disabilities.

Table 6.5 shows that wages and salaries (48.8%) took up the greatest share as an income source in the Omaheke Region, while retirement funds and orphan grants took the lowest share, at 0.7 percent each. In urban areas, 62.3 percent of households reported wages and salaries as the highest main source of income, while farming (30.5%) dominated in rural areas.

Table 6.5 Percentage distribution of households by main source of income and area

Area	Household s	Business Activities - Not Farming								
		Farming	Wages and Salaries	Old- Age Pensio n	Cash Remittances	Retire ment Fund	Orphan 's Grant	Disabilit y Grant	Other

6.4 Household assets

The ownership of assets is an important indicator of social welfare and living standards. Households that own certain assets have higher standards of living than those without. The Census collected data on a wide range of assets including cars, television sets, radios and mobile phones.

Table 6.6 presents information on communication assets. The results show that radio and mobile phones were the most commonly owned communication assets in the Omaheke Region, with 68.1 per cent and 58.1 percent owning these assets respectively. More urban households owned radios (73%) than rural ones (65.7%). Only 3.2 percent of all households had internet connectivity and the majority of them were in urban areas.

Table 6.6 Percentage distribution of households owning selected transportation assets by area

Area	Households	Radio	Television	Telephone (Fixed)	Telephone (Mobile)	Computer/Laptop	Home Internet Connectivity
Omaheke	16 174	68.1	30.3	8.8	58.1	7.4	3.2
Urban	5 275	73.0	50.0	13.2	74.5	13.9	4.2

Epukiro	1 231	78.3	18.8	8.9	59.8	1.0	0.2

6.5 Language spoken at home

Information on the main language spoken in the household was collected from all households. The results from Table 6.7 show that, Herero languages were the main language spoken in households in the region, with 41.5 percent. German was the language least spoken in households, at 0.4 percent.

Table 6.7 Distribution of households by main language spoken

Area	Households	Percent

6.6 Agriculture Activity

Agriculture is defined in the population census as any activity directly related to the production or processing of crops, dairy products, poultry or livestock for commercial sale or as a principal means of personal subsistence. This is known as 'own-account' agriculture. Information was collected on the type of agricultural activities in which households were engaged during the 12 months prior to the census. Where applicable, households could report more than one type of agricultural activity.

The results in table 6.7 show that livestock farming was the most common agricultural activity in the Omaheke Region and was reported in 26.5 percent of households, while the least common was poultry (6.6%). Overall, livestock farming dominates in all constituencies of the region. In comparing constituencies, Epukiro had the most households engaged in livestock farming (64.8%). Close to 20.0 percent of households in Steinhausen were engaged in poultry farming.

Table 6.7 The percentage of households engaged in own account agriculture activity by area

Area	Households	Own account agricultural activity			
		Livestock	Crop	Poultry	Other

Epukiro	1 231	64.8	8.2	8.2	9.1

CHAPTER 7: HOUSING CHARACTERISTICS

This Chapter analyses the characteristics of housing, including all structures used as dwelling units. Aspects considered are the type of housing, type of tenure, materials used for building, housing utilities, sources of energy and water supply and sanitation.

7.1 Type of housing

The census specified nine types of housing units: detached house, semi-detached/townhouse, apartment/ flat, guest flat, part commercial/industrial, mobile home (caravan, tent), single quarters, traditional dwelling and improvised housing unit (shack).

Table 7.1 indicates that detached houses were the most common types of dwelling units, accounting for 53.7 percent of households in the Omaheke region. The single quarters were the least common housing type at only 1.8 percent. The table also shows that detached houses were more common in rural than in urban areas. It is worth noting however, that 38.8 percent of the households in urban areas lived in improvised housing units/shacks. Traditional dwellings are more common in Otjombinde (47.3%) than in any other constituency.

19% of households reside in improvised housing units (shacks)

Table 7.1 Percent distribution of households by type of housing unit and area

Area	Households	Detached House	Semi-Detached House	Single Quarters	Traditional Dwelling	Improved Housing Unit (Shack)	Other Housing unit
Omaheke	16 174	53.7	7.0	1.8	13.9	18.4	5.2

7.2 Type of Tenure

Tenure refers to the conditions which govern the rights of individuals to occupy dwelling units. The most frequent forms are tenancy (in which rent is paid to a landlord) and owner occupancy which can be subdivided into owner-occupier or mortgaged. In the case of tenancy, the landlord may be a private individual, non-profit organization such as a housing association, or a government body that provides public housing.

Table 7.2 shows that most housing units (48.2%) in the region were owned and occupied by households without a mortgage. These were more common in rural areas (52.3%) than urban areas (39.8%). Housing units occupied by owners with mortgages were mainly found in urban areas (23.4%), and less so in rural areas (6.5%).

Table 7.2 Percent distribution of households by type of tenure status, by area

Area	Households	Owner Occupied With Mortgage	Owner Occupied Without Mortgage	Rented work related	Rented (Individual)	Occupied Rent Free	Other
Omaheke	16 174	12.0	48.2	4.2	3.6	30.9	1.0
Urban	5 275	23.4	39.8	9.0	7.3	20.0	0.5
Rural	10 899	6.5	52.3	1.9	1.7	36.3	1.3
Aminius	2 700	7.9	60.3	2.1	2.6	24.3	2.9

Epuke	1 231	2.6	55.5	1.2	1.8	38.5	0.4

7.3 Average number of persons per sleeping room

The Census collected information on the number of sleeping rooms per household. The average number of persons per sleeping room (or room occupancy) can be used as an indicator of crowding.

Table 7.3 shows that on average, the number of persons per sleeping room in Omaheke was 2.0. This suggests that most households are not overcrowded. There were no major differences between room occupancy in urban and rural areas as well as between constituencies in this respect.

Table 7.3 Average number of persons per sleeping room by area

Area	Household Population	Number of sleeping rooms	Average persons per sleeping room
Omaheke	69 620	34 915	2.0
Urban	20 345	10 569	1.9
Rural	49 275	24 346	2.0

Steinhausen	9 786	5 351	1.8
Epukiro	6 073	3 046	2.0

7.4 Materials used for construction

This section presents information on the materials used to construct roofs, walls and floors, which are important indicators of the socio-economic conditions and welfare of households. Most of the materials used can be broadly divided between those that are harvested with labour from local resources (grass, stick, mud and dung etc.) and those that are purchased with cash (cement bricks or blocks and corrugated iron).

Table 7.4 shows that 42.3 percent of the households reside in dwellings with walls made from cement/bricks. About 45.4 percent of urban households used cement/bricks for outer walls, compared to 40.8 percent of rural households. Corrugated iron/zinc was the second most commonly used construction material in both urban (43.6%) and rural areas (39.0%).

At a constituency level, households with walls constructed from cement blocks/bricks/stones were predominantly found in Steinhausen (61.4%) and Kalahari (52.8%). On the other hand, mud/clay and/or cow dung walls were most common in Aminius (16.7%), and Otjinene (12.6%).

39% of households resided in dwellings with walls made with Corrugated Iron/Zinc

Table 7.4 Percent distribution of households by main material used for outer walls and area

Area	Households	Cement Blocks/ Brick	Burnt Bricks/ Face Bricks	Mud/ Day Bricks	Corrugated Iron/Zinc	Prefabric ated Materials	Wood Poles/Stic ks or Grass/Ree ds	Sticks with Mud/Day Cow Dung	Tin	Other
Omaheke	16 174	42.3	1.7	1.3	40.5	3.2	1.1	7.1	1.6	1.1

7.5 Sources of energy

Data collected from private households on energy for cooking, lighting and heating can provide useful information on social conditions and development. This information is also valuable as a measure of Namibia's use of renewable energy (such as solar and wind power) and non-renewable resources (oil and coal, for instance), as well as of the environmental consequences of using different kinds of energy.

Table 7.7 indicates that about 73 percent of households in Omaheke region rely on wood as the main source of energy for cooking, while about 17.9 percent use electricity from the main grid. More than 84 percent of rural households rely on wood for cooking, compared to 50.6 percent of households in urban areas. It is worth noting that only 33 percent of households in urban areas use electricity from the main grid for cooking. The majority of households in all constituencies use wood as the main source of energy for cooking.

Table 7.7 Percent distribution of households by main source of energy for cooking and area

Area	Households	Electricity from Mains	Electricity from Generator	Gas	Paraffin/Kerosene	Wood/Charcoal from Wood	Charcoal-coal	Animal Dung	Solar Energy	Other
Omaheke	16 174	17.9	0.6	7.1	0.5	73.2	0.4	0.1	0.2	0.0
Urban	5 275	33.2	1.0	13.9	0.9	50.6	0.2	0.1	0.1	0.1
Rural	10 899	10.6	0.4	3.8	0.3	84.1	0.5	0.1	0.2	0.0

Steinhausen	2 328	17.7	0.3	5.6	0.1	75.6	0.6	0.0	0.1	0.0
Epukiro	1 231	5.9	0.2	2.6	0.1	90.9	0.1	0.1	0.1	0.0

With respect to the sources of energy for lighting, the results from table 7.8 show that the most common energy source in the region was candle light, at 34.5 percent, followed by electricity from the main grid (33.4%). In urban areas, around 46.3 percent of households used candles for lighting, followed by electricity from the main grid (46.1%). In rural areas, most households used paraffin/kerosene for lighting (36.7%), followed by candle light, (28.8%). Solar energy was not widely used, but plays a more important role in rural areas (4.0%) than in urban areas (0.3%). The use of electricity from mains for lighting was most prominent in Steinhausen (52.8%), while the rest of the constituencies relied predominantly on candles or paraffin/kerosene for lighting. Otjombinde and Otjinene made up the largest proportions of households using paraffin, at 62.3 and 51.2 percent respectively.

34% of households use candles as their main source of lighting

Tables 7.8 Percent distribution of households by main source of energy for lighting and area

Area	Households	Electricity from Mains	Electricity from Generator	Gas	Paraffin/Kerosene	Wood/Charcoal from Wood	Candles	Solar Energy	Other

7.6 Water Supply and Sanitation

The results from table 7.9 show that 85.1 percent of households in Omaheke region had access to safe water. The results further show that about 96 percent of the households in urban areas had access to safe water, compared to 79.8 percent of those in rural areas. With regards to unsafe water, 18.9 percent of households in rural areas rely on boreholes with an open tank, and unprotected wells as their main source of water for cooking/drinking.

At constituency level, it is observed that only 63.9 percent of the households in Otjombinde had access to safe water, while 26.6 percent relied on boreholes with an open tank and unprotected wells.

85% of households have access to safe water

Table 7.10 Percent distribution of households by main source of water for cooking/drinking and area

Area	Households	Piped Water Inside	Piped Water Outside	Public Pipe	Borehole with Tank Covered	Well Protected	Safe water	Borehole with Open Tank	River/Dam/Stream	Other

Note: Other = River/Dam/Stream/canal and Well Unprotected

With respect to the type of the main toilet facility, the results presented in table 7.10 show that about 60 percent of households in Omaheke region had no toilet facility, and only 35.7 percent had access to a flush toilet. There were notable differences between urban and rural areas. In urban areas 42.7 percent of the households used flush toilets, while the rural percentage was only about 14 percent. At the constituency level, Gobabis had the greatest proportion of flush toilets (41%), though a larger percentage of the constituency's households (47.2%) were without a toilet facility.

About 60% of households have no toilet facility

Table 7.11 Percent distribution of households by type of main toilet facility and area

Area	Households	Private Flush Connected to Sewer	Shared Flush Connected to Sewer	Private Flush Connected to Septic/Cesspool	Shared Flush Connected to Septic/Cesspool	Pit Latrine with Ventilation Pipe	Covered Pit Latrine without Ventilation Pipe	Uncovered Pit Latrine without Ventilation Pipe	Bucket Toilet	No Toilet Facility	Other

7.8 Garbage and waste disposal

Table 7.11 shows that the most common means of disposing garbage in Omaheke region was burning (38.2%). Regular collection accounts for 25.1 percent of household waste disposal. In urban areas, 58 percent of the households benefit from regular waste collection while 52.2 percent of households in rural areas burn their waste. Similarly, at constituency level, regular waste collection was most common in the Gobabis (55.6%). Other constituencies depend largely on burning or using a rubbish pit as a means of disposing of their household waste /garbage.

Table 7.12 Percent distribution of households means of waste/garbage disposal by area

Area	Households	Regularly Collected	Irregularly Collected	Burning	Roadside Dumping	Rubbish Pit	Other

Annexure

Glossary of Census terms

The concepts and classifications used in the 2011 Population and Housing Census are defined below. These concepts and classifications are based on regional and International recommendation with adaptations to suit local conditions.

Geographic Concepts

Omaheke Region consisted of seven (7) constituencies, namely: Aminius, Gobabis, Kalahari, Otjinene, Otjombinde, Steinhausen and Epukiro

Locality

For the purpose of the Census, a locality is defined as a distinct population cluster, irrespective of size, in which people live and which has a name or locally recognized status.

Enumeration area

For the purpose of enumeration (census data collection/counting), the whole country was divided into small geographical areas of manageable sizes known as enumeration areas (EAs).

Dwelling unit

A dwelling unit is a unit of accommodation of a household that may be vacant or shared by more than one household.

Marital status

Is defined as the person's personal status in relation to the marriage laws or customs of the country

Live birth

A child born alive is one who cries after being born. Thus, a live birth is a birth which results in a child that shows any sign of life irrespective of the time or period within which these signs are manifested.

Early childhood development

This refers to children aged 0 - 4 years who were attending day-care, crèche, kindergarten and pre-primary school. The categories were as follows: Educare (daycare, crèche, kindergarten) and pre-primary school.

.

Literacy

This refers to the ability to read and write with understanding in any language. Those that could both read and write with understanding were classified as literate; and those who could only read but not write were classified as illiterate.

School attendance

This refers to full time attendance at any regular educational institution, public or private, for systematic instruction at any level of education.

Educational attainment

The highest standard, grade or years completed at the highest level of school, college or university attended.

Disability

This refers to a condition of loss of physical or mental function resulting in inability to perform daily activities. Disability is aggravated by physical, personal, and environmental barriers.

Occupation

This refers to the type of work, trade or profession performed by an individual during the Census reference period, irrespective of status in employment of the individual.

Industry

This refers to the main goods and/or services produced at the person's work place (if employed) or usual place of work (if on vacation, sick leave).

Employment status

This refers to the status of those employed during the reference period or those who were on sick/vacation leave and had a job to return to, in terms of either working/worked as employees, employers, own account workers, or unpaid family workers.

Household

A household consists of a person or a group of persons related or unrelated who lived together in the same homestead/compound but not necessarily in the same dwelling unit.

Head of household

The head of household is the person (of either sex) who is looked upon by the other members of the household as their leader or main decision-maker.

Children and orphan headed household

This refers to households headed by children/orphans aged 18 years and below. Orphans are children 18 years and below who during the time of the Census were orphaned by one or both parents.

Household assets

Ownership of assets is a good measure of the social well-fare and standard of living of households. Hence, households were also asked whether they owned certain assets, and the assets had to be in working condition. Assets included: car, motorbike, bicycle, radio, television, telephone (landline), telephone (mobile), computer/laptop, refrigerator/freezer, stove, microwave, etc.

Agricultural activities

This refers to activities such as the farming of crop, poultry, or livestock, agro processing and horticulture.

Housing unit

This refers to separate and independent living premises occupied by the household.

Tenure

This is the arrangement under which the household occupies all/or part of a housing unit. This looks at whether the housing unit was owner-occupied, rented or rent-free.

Number of sleeping rooms

These are all rooms used for sleeping purposes only, thus it excludes rooms such as study rooms, toilets, kitchens, passages etc. However if a room such as a garage was used for sleeping purposes it was considered a sleeping room.

Material used for outer-walls, floor and roof

This refers to the main material used for the construction of the household's housing unit. Materials may include cement blocks/bricks/stones, burnt/face bricks for outer-walls, or corrugated iron-sheets, brick tiles, concrete for roof, or sand/earth, cement, mud/clay for floor, etc.

Source of water for cooking and drinking

A measure of the well-being of Namibians is the proportion of households that have access to clean/potable water. This question referred to the main sources of water used by the households for cooking and drinking.

Source of energy for cooking, lighting and heating

This refers to the type of energy most often used for cooking, lighting and heating. The sources include electricity, gas, solar, wood, candle, charcoal, paraffin, etc.

Type of toilet facility

This information provides a measure of sanitation level of the household since these facilities are important for disease control and health improvement. This looked at whether the household used a private toilet connected to the main sewer, public toilet connected to the sewer, private toilet connected to septic tank, public toilet connected to septic, etc.

Garbage and refuse disposal

This information can be used in obtaining the hygiene level of the household since these facilities are important for disease control and health improvements.

The Enumeration Area Map

Table 2.1 Total population by sex and single years

Age	Population			Age	Population		
	Total	Female	Male		Total	Female	Male
